Mark,

An update to our discussion yesterday, received some info about the meeting on the 31st with Alan Walts. The one main item there looking to promote is a more health based response in the area with ATSDR and Chicago Health Dept.(would State Health get involved with this at all) coordinating to offer BLL testing of children in both these neighborhoods. I think the hope is if high levels are found it could elevate homes into the sensitive population category. They also were interested if ATSDR had reviewed any available BLL data in these areas. I’m not sure if they were talking about offering testing to everyone in the zones or just homes that were previously sampled and had lead levels between 400-1200mg/kg. Does Chicago Health have local clinics out in neighborhoods or mobile facilities they could bring in, also significant outreach would be needed. Let me know what you think, we can set up a call with Mike and Sam down the road.
